

QUICK DENTAL IMPLANT PROCEDURES

teethtoday™

“It’s quality of
life for the future.”

- Jose

A whole
new smile.
Quickly.

We know that the idea of a dental implant can be a little overwhelming if you've never had one before. The good news is, we're here to help you learn what's involved and see if an implant is right for you. And if an implant is the right choice for you, we have a solution that may reduce the number of procedures needed!

SOMETHING TO SMILE ABOUT

Healthy teeth and gums are an important part of your overall health and wellbeing. We also know that how your teeth look can make a big difference in your life. When your teeth – and your smile – look good, you have more confidence and you're more willing to share your smile with the world.

The Advantages of Dental Implants

Preserves healthy teeth near the implant location. Unlike a bridge, which extends across an area with missing teeth and requires adjacent teeth to be ground down to provide support, a dental implant replaces the root and holds a crown on top creating a natural-looking tooth.

Healthier for your jaw and mouth compared to a conventional denture. Since implants are rooted to your jaw, they transmit chewing forces to your jawbone, which helps maintain bone and facial structure. That's not the same when tooth roots are missing.

A long-lasting solution. Bone naturally grows and bonds to the implant for added durability because a dental implant is simply an artificial root.

Looks and feels natural, like your own teeth. It's true! Dental implants can provide you the look and feel of natural-looking teeth – and there is no special care needed beyond a good dental hygiene routine.

It's important to remember that not all implant treatments are the same. Some treatments can take more time and appointments, and are done in multiple phases that can take months.

With select Straumann implants, the process can be much shorter and you can have your smile fast!

Are you interested in dental implants but not sure what to ask your dentist? Use the following questions as your guide!

- What type and brand of implants do you use? What made you choose them?
- Is there clinical evidence that shows why that implant is a good choice?
- Which brand of implant would you select for yourself or your family?

Over time, dental implants are a cost-effective alternative to “conventional restorations” such as bridges, crowns or dentures. Our solutions may also require fewer appointments.*

When you need to replace one or more teeth and want to regain your smile quickly, an implant is a great solution.

*for patients whose clinical situation allows for less invasive or advanced treatment options

Straumann® stands for premium Swiss quality implants and precision innovation, delivering confidence to patients and dentists, backed by one of the largest global expert networks available. Straumann pushes boundaries to inspire the next generation of dental care, centered on patient health, quality of life and long-term durability.

Every surgical procedure carries potential risks. You should always consult with a dental professional prior to treatment. Potential risk factors may vary depending on medical or other conditions of each patient. The possibility of immediate placement and the use of a prosthetic tooth depends on many factors, such as bone presence and quality, dental history, implant location, and availability of the final restoration. Your clinician will fully describe the possible scenarios to you during consultation prior to surgery. Every surgical procedure carries potential risks. Consult your clinician to find out if dental implants are right for you.
